RE: Parasite Destruction of Salmon Roe Products

Dear Valued Customer:

In compliance with the U.S. Department of Health and Human Services Food and Drug Administration, 21 CFR Parts 123 and 1240, we are providing this letter to certify that all Salmon Roe products distributed by Optimus, Inc. dba Marky's Caviar, are parasite-free and have been processed in accordance with FDA Fish and Fishery Products Hazards and Control Guidance, June 2022, Chapter 5: Parasites, pg. 92-93 to ensure the safety of the product:

- All raw material used to process all sold products has been frozen to -4°F or below for at least 7 days and/or the raw material used has been farm-raised and pellet-fed.
- All finished products are Ready-to-Eat (RTE)

Please note: all our Salmon Roe products remain in a frozen state until such time as they are requested for repacking and purchase, thus maintaining the frozen cycle necessary to avert any concerns of infection.

Please let me know if you have any questions or require additional information.

Very truly yours,

Mark Gelman
President
